Overview

Infinity Heart Health wanted to develop a website to provide information and help users who require chronic care. The client wished to have the following sections on the website:

- Chronic Care Management
- Connected Care Solution
- Personal Care

Requirement

The client wanted an attractive website with a simple, static UI to provide information on Chronic Care Management, Chronic Care Solution, and Personal Care. The client needed a strong back-end admin panel to manage the static contents of the website.

The Challenge

- To provide a professional and elegant design
- Responsive design to allow the users to access the website across all mobile native browsers
- Create a user-friendly and engaging website that holds the attention of the users
- Quick navigation options to provide the users with the information they want in a jiffy.

Proposed Solutions

To match the needs of the client, DCI decided to use Wordpress as the web development platform to ensure that the site is user-friendly and provides patients with the information that they need easily and quickly.

Wordpress

DCI chose Wordpress as the web-development platform for the following reasons:

- WP provides pre-designed mobile-responsive templates that can be easily customized according to your requirements.
- It includes several pre-built modules that can be enabled or disabled for better functionality.
- User-friendly, comprehensive back-end with distinct modules to manage the overall content of the site.
- WP is a safe platform that ensures only authenticated users can update content and media on the website through the site's control panel.
- Offers great security options
- All sensitive data pulled from the website is encrypted before being stored in the database.
- The website design and content formatting follow the Web Content Accessibility Guidelines (WCAG) set down by the W3C to make the content more accessible to people with disabilities.
- WordPress, as a CMS, is a scalable system that allows further expansion through its customizable plugins and modules
Results

DCI created a visually stunning, secure, and easy to navigate website for Infinity Heart Health that was much appreciated by the client.
